

This practice is proud to contribute data to the Clinical Practice Research Datalink (CPRD)

CPRD

The Clinical Practice Research Datalink (CPRD) is the English NHS observational data and interventional research service. The data CPRD holds has been used internationally for over 20 years for research into disease, drug safety and public health.

Patients' records from hundreds of practices in the UK are made anonymous so that research users cannot identify the patients or the practices. Added together, these anonymous records provide a vast amount of information for medical research.

CPRD is jointly funded by the NHS National Institute for Health Research (NIHR) and the Medicines and Healthcare Products Regulatory Agency (MHRA), a part of the Department of Health.

Our role

- We have agreed to contribute data from this practice to the CPRD and support its work improving and safeguarding public health.
- We assure the anonymity of individual patients and clinicians in all cases.

Benefits

The practice receives

- Valuable feedback on the data we submit. This helps us to improve our record-keeping and the care of our patients.
- Medical research opportunities such as participation in clinical trials and interventional studies, for which we are financially compensated.

A leaflet giving more detailed information about CPRD is available, including information about how you can opt out from CPRD. If you would like a copy, please ask a member of practice staff.
