Transforming healthcare together

Join a nationwide research study that aims to analyse the health and genetic information of thousands of people.

'Discover Me' aims to improve our understanding of many different diseases, and to identify ways to help GP practices improve patient care.

By taking part in 'Discover Me' you'll be able to receive information about your ancestry and some of your health information through a secure online participant portal.

Access to this information could also help you and your GP make better decisions about your health care.

Your contribution, along with thousands of others, will help improve the health and care of future generations.

Anyone aged 18 or over can join 'Discover Me'
To find out more, ask your GP practice or visit
