

**We are looking for volunteers to help us understand what is in human milk and how it is personalised to different mothers and babies**

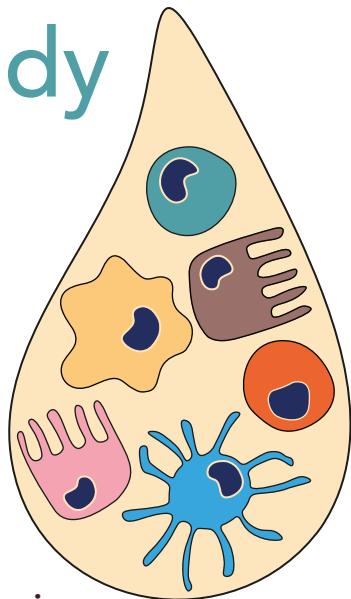

Study approval number: HBREC.2023.06  
Version 1.2 26/02/2025

# CAMBridgeshire Multi-Omics of Milk study

## What do I have to do?

Contact us using the information below to register your interest. To take part you will need to complete a questionnaire and provide us with saliva and a fresh milk sample. You will also have the option of providing gut microbiome (faecal) samples to help us understand more about infant gut development.

## What are the risks?

There are minimal risks associated with participating in this study.

## Why should I take part?

This study will help us to improve our understanding around the process of lactation and may help provide clues to help us understand how milk is personalised to different individuals and why some women can't produce enough milk.

## Want to find out more?

Please contact:  
CAMB MOM study team
