

## What is a structured medication review?

A structured medication review involves a telephone call with a pharmacist to talk about the medicines you are currently taking. It is an opportunity for you to discuss your medication and ensure that you are getting the best from the medicines that are prescribed for you.

## Why do I need a review?

The aim of the structured medication review is to check that you are prescribed the most appropriate medicines and that you get the best out of those medicines.

When you are first prescribed a medicine, it is usually the best one for you, however, things change:

- You might have developed a side effect
- Your health may have changed, such as developing a long-term condition or a change in a long term condition you already have

Any of these reasons, as well as others, can mean the medicine might not be right for you anymore.

## What happens at a structured medication review?

The review will be carried out by a pharmacist. They will ask you questions and also look at your medical record; this will allow them to check you are on the medication that is right for you.

The review will be between 15 and 30 minutes long. You will have the chance to ask any questions or raise any concerns you have about your medicines.

The pharmacist may suggest some changes to your medicines. They will explain these changes and why the change will benefit you.

These changes may include: a change to a new or different version of a medicine, changing the dose, changing the time of day you take your medicine or stopping a medicine.

## How will my review be carried out?

The pharmacist will carry out your review around some main themes:

- Patient Centred - what matters to you?
- Aims - Do you think the medicine is making you feel better? Think about what is important to you about your treatment
- Need - is the medicine essential? Could lifestyle changes mean the treatment objectives are achieved?
- Effectiveness - is the medicine controlling your symptoms?
- Safety - is the medicine making you unwell (side effects)?

### Questions you may want to ask:

Make a list of questions that you may have about your medicines.

Some questions that you may wish to consider:

- What is the medicine for?
- Why is it important to take this medicine(s)?
- When and how do I take it and how long for?
- How long is the medicine(s) to be taken for?
- How do I know the medicine is working?
- What should I do if I have problems with the medicine?
- Are there any medicines or food that I should avoid taking whilst on these medicine(s)?
- What will happen if I miss a dose of the medicine or stop taking it?

If you and the pharmacist decide that one or more of your medicines should change, you may want to ask some of the following questions:

- What is the medicine for?
- How and when do I take it and how long for?
- Are there any side effects?
- What should I do if I become ill while taking this medicine?
- Do I need regular check-ups once I am taking this medicine?

### Can I have somebody with me?

You are welcome to have a family member, a friend or a trusted person who handles your medication present for your medicines review.

### I only speak a little English is that okay?

Yes, that is absolutely fine, you may have someone trusted there to translate for you if you feel comfortable, but we can also arrange an official translator to help out.

### Where can I get further information about my medicines?

- Your local pharmacy
- Your GP Practice
- The NHS Website: <https://www.nhs.uk/>
