

TELL US YOUR VIEWS AND OPINIONS OF THE QUESTIONNAIRES THAT ARE USED TO MEASURE SOUND SENSITIVITY

HELP US IMPROVE HYPERACUSIS RESEARCH

ARE YOU SENSITIVE TO SOUND?

Hyperacusis is a hearing disorder involving increased sensitivity to everyday sounds that would not trouble most people.

HOW DO WE MEASURE THE IMPACT OF HYPERACUSIS?

Questionnaires are used. Yet we do not know if they are reliable, useful or relevant to your experiences of hyperacusis.

If you are an **adult experiencing hyperacusis**, we need you to complete our online questionnaire survey on two separate occasions and **tell us your views and opinions on the questionnaires for hyperacusis**

Never seen a hyperacusis questionnaire, not a problem, we still want your views.
