

Medicines & Healthcare products
Regulatory Agency

This practice contributes to the Clinical Practice Research Datalink

Information in patient records is important for medical research to develop new treatments and test the safety of medicines. This practice supports medical research by sending some of the information from patient records to the Clinical Practice Research Datalink (CPRD).

CPRD data services from the Medicines and Healthcare products Regulatory Agency provide anonymised patient data for research to improve patient and public health. No information that can directly identify you is sent to the CPRD. Limited identifiable information relating to you (your NHS number, sex, date of birth and residence postcode) is sent directly to NHS England to enable data linkage.

If you do not want anonymised information from your patient record to be used in research you can opt out by speaking to your doctor.

For more information about
how your data is used visit
