

minute do it yourself self-examination that could save your life!

Examine yourself once a month using our 2 minute self check guide below! All you need is a mirror, a good light source and clean fingers!

Follow the step
by step guide.
At each step you
are looking for
anything unusual
especially any
lumps, red or
white patches,
changes in
colour/texture or
lingering ulcers.
If you are worried
about anything
contact your
dentist or doctor.

01 Face

Look at the whole
face - are there any
swellings you haven't
noticed before? Inspect
your skin - has anything
changed recently? Have
moles become larger
or started to itch or
bleed. Turn your head
from side to side - this
stretches the skin over
the muscles making
lumps easier to see.

The

02 Neck

Run your fingers under your jaw and feel along the large muscle either side of neck using the balls of your fingers. Are there any swellings? Does everything feel the same on both sides?

03 Lips

Use your index, middle finger and thumb to feel the inside of your mouth. Pull your upper lip upwards and bottom lip downwards. Look inside for any sores or changes in colour.

04 Gums

Use your thumb and forefinger. Examine your gums feeling around the gum for anything unusual.

05 Cheeks

Open your mouth and pull your cheeks away, one side at a time, with your finger. Look for any red or white patches. Does everything feel the same on both sides? Use your finger in the cheek to check for ulcers, lumps or tenderness. Repeat on the other side. Your tongue can be helpful to locate sore areas, ulcers or rough patches.

06 Tongue

Gently pull out your tongue and look at one side first and then the other. Look for any swelling, ulcers or change in colour. Examine the underside of your tongue by lifting the tip of your tongue to the roof of your mouth.

07 Floor and Roof of Month

Tilt back your head and open your mouth wide to inspect the roof of your mouth.

Look to see if there are changes in colour or ulcers. Check for changes in texture with your finger. Lift your tongue up and look underneath at the floor of your mouth. Look for any colour changes that are unusual.

Gently press your finger along the floor of your mouth and under your tongue. Feel for any lumps, swellings or ulcers.

Symptoms

- ✓ An ulcer or white or red patch anywhere in the mouth that does not heal within 3 weeks.
- ✓ A lump or swelling anywhere in the mouth, jaw or neck that persists for more than 3 weeks.
- Difficulty in swallowing, chewing or moving the jaw or tongue.
- ✓ Numbness of tongue or other area of the mouth.
- ✓ A feeling that something is caught in the throat.
- A chronic sore throat or hoarseness that persists more than 6 weeks.
- Unexplained loosening of teeth.

Risk Factors

- ✓ Tobacco use is the main cause of mouth cancer.
- ✓ Drinking alcohol to excess can increase risks four fold.
- ✓ Drinkers <u>and</u> smokers are 30 times more likely to develop mouth cancer.
- Poor diet and social deprivation is linked to a third of all cancer cases.
- ✓ The Human Papilloma Virus (HPV), transmitted through oral sex, could overtake tobacco and alcohol as the main risk factor within the next decade.
- ✓ Exposure to the sun is a cause of skin cancer which can affect the lips and face.
