

## Staying up to date with vaccinations

Vaccination is the safest way to protect your child from infectious diseases in a safe and controlled way without becoming ill with the disease or passing it on to others.

There are **free vaccinations available for school aged children** from reception to year 11 (age 4 to 16), given in school or at community clinics.

### Vaccinations for school age children are:

#### Flu

A nasal spray given annually each autumn/winter. A porcine free vaccination available if required.

#### Human Papillomavirus (HPV) (protects against some cancers and genital warts)

One injection in year 8

#### Tetanus, diphtheria and polio (3-in-1 teenage booster)

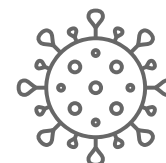

One injection in year 9

#### Meningococcal (Men) ACWY vaccine (protects against bacteria that cause some types of meningitis)

One injection in year 9

For more information about free NHS vaccinations visit:
